DETAILED ACTION

Response to Remarks

1. The Office Action has been issued in response to RCE filed October 26, 2007. Claims 1-6, 8, 10-11 and 15-20 are pending.

IDS

The IDS dated (10/26/2007) has been considered by the Examiner.

Allowance

2. The following is an examiner's statement of reasons for allowance: The following is an examiner's statement of reasons for allowance: The most pertinent prior art is Cox (Patent No.: 6,226,396) and Ho et al (Patent No.: 6,983,057). Cox discloses a robust digital watermarking method: the method includes inputting image data with registration signals embedded therein, subjected to geometric transformation, and extracting registration signals from said inputted image data to perform registration processing. Cox teaches registration signal extracting step of extracting registration signals from said image data. Cox further teaches a frequency property determining step of determining frequency properties of said image data. However Cox does not teach a geometric transforming step of performing inverse transformation of said identified geometric transformation. Ho discloses a method for embedding a watermark including a geometric transforming step of performing inverse transformation of said identified

geometric transformation. However, neither Cox nor Ho disclose a geometric transformation identifying step of identifying geometric transformation to which said image data is subjected, using said extracted registration signals and determination results of said determination in the frequency property determining step. Therefore, if watermarked data has undergone some kind of geometric transformation or attack by a perpetrator trying to altered the watermarked data, this method would be able to discern the type of attack and restore the watermark data. The examiner finds no reason or motivation to combine the above references in an obvious rejection thus placing the application in condition for allowance.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Hosinger et al (US Patent No.: 5,835,639) is cited to teach a method for detecting rotation and magnification in images

Rhoads et al (US Patent No.: 6,408,082) is cited to teach watermark detection using a fourier mellin transform.

Rhoads et al (US Patent No.: 6424725) is cited to teach a method for determining transformation of media signals with embedded code.

Rhoads (US Patent No.: 6,567,533) is cited to teach a method for discerning image distortion.
